

## COMPANY PROFILE

UNIKEN is a product and technology innovation company that develops marketable innovations and specializes in innovation-life-cycle management right from concept development to unlocking the commercial value of that technology.

We work closely with our customers to provide high quality solutions that meet their business automation and cutting edge technology needs. In fact, it's our attitude towards innovation that makes us who we are.

UNIKEN was started in 2003 by senior professionals from Infosys, GE, TCS & Motorola in Boston, USA. Today, our teams work out of Corporate Office (Florida, USA), Innovation Center (Pune, INDIA), Malaysia and UK. The product designers and engineers, technologists and researchers at the Innovation (R&D) Center have strong backgrounds in computer science, biometrics, software technology, embedded systems and services.

Over the past few years, we have managed to successfully create an evolving, dynamic and self-sustainable innovation ecosystem that creates solutions for fundamental problems that impact human lives. We have already developed 3 cutting-edge technologies:

- Relative Identity / Mutual Authentication
- Secure Internet Banking, Transaction, Data Exchange & Communications
- Hand Geometry (non-image based) Verification System

And besides having a number of whitepapers and patents to their credit, our team members have built Intellectual Properties (IPs) in the following domains:

- Fuel Management
- Website Sales Management
- Mobile Marketing & Promotions

While our disruptive technologies are being adopted by leading banks and corporates across India and the APAC region, we have partnered with CIIE (IIM-Ahmedabad), to set up Technology Innovation & Entrepreneurship Labs across campuses in India.

UNIKEN has also initiated an in-house 'Innovation Program' and started a Research Fellowship Program to develop new ideas and prototypes for future technologies, products & services.
