

MOBILE FIRST

MOBILE IS THE HEART OF INTERACTION WITH YOUR CUSTOMER ACROSS ALL CHANNELS

Drives Client Engagement

Enables a phenomenal client experience that is fast, secure and zero friction driving increased client engagement. In fact our clients report double to triple digit gains.

Full Omnichannel

Conduct business over client preferred channels with absolute certainty that approvals are completed by the designated signatory - no shared credentials - capture and log biometrics and geolocation.

Eliminates Risk

No 3rd party dependencies allow us to close the door on hackers and eliminates risk such as: credential compromise, phishing and harvesting. Removes internal company threats such as client account take over.

Simplified User Experience

One consistent experience across all channels that requires No passwords, No SMS, No pin rekeying, No hard tokens, No challenge questions. Verifies any transaction during the normal transaction flow.

Fast ROI - Within a Year

At pennies per user, our unified defense in depth approach eliminates the need for multiple technologies. Removing passwords and PII dramatically reduces call center volumes.

No Personal Info (PII) Ever Needed

Eliminate the threat of social engineering and the Equifax data breach. Improve your privacy posture and inform your clients that you will never ask for PII.

Amazing Security

Intelligent end point protection at consumer speed and scale. Unique 1:1 split symmetric cryptographic keys for every device / application pair allowing full bidirectional authentication. Eliminate weaknesses in SSL/TLS and allow your APIs to go fully dark to the internet.

SCALABLE. SECURE. PROVEN.

Ensuring Mobile First

- ✔ Make your mobile app the security control that creates a consistent and secure omnichannel experience across mobile, browser, call center kiosk and in-person interactions.
- ✔ Enable a mobile experience that doesn't require passwords, PINs, codes received via SMS or 3rd party apps.
- ✔ Leverage biometrics of your choice to give customers the convenience they want and the security they expect.
- ✔ Safely and easily verify all transactions with context-rich notifications and fully audited responses.
- ✔ Remove use of PII from all call center interactions by leveraging your mobile app to quickly and securely verify customer identity.
- ✔ Satisfy business risk and compliance requirements for your mobile app security to unlock its potential by adding features and operations you couldn't before.
- ✔ Add data heavy features by encrypting all sensitive data stored on the device.
- ✔ Increase engagement and customer satisfaction by adding amazing security that is painless to use.

REL-ID enhances security while also reducing security spend and deployment complexity – a real game changer. Deploying **REL-ID** unlocks the power of your digital channel, makes life easy for the user, enhances your regulatory and internal compliance proactively. [Contact us today!](#)
